

TARIQ OMARI

Full Stack Developer

📞 0780270340 ✉️ tariqomarii163@gmail.com 🔗 [Linkdln](#) 🔗 [GitHub](#) 📍 Kabul-Afghanista

SUMMARY

Highly skilled Full-Stack Developer with deep hands-on experience in React, Spring Boot, Node.js, and Laravel, capable of building scalable, secure, and high-performance applications end-to-end. I excel in transforming complex requirements into clean, maintainable code and delivering reliable solutions across both frontend and backend. With strong problem-solving skills, API design expertise, and a proven record of optimizing user experience and system performance, I bring a balanced mix of technical excellence, creativity, and ownership—making me a strong asset for any engineering team.

EXPERIENCE

Full Stack Developer

Wama solution

📅 01/2023 - Present 📍 Kabul

Software Development Company

- Developed multiple full-stack MIS (Management Information Systems) for various companies, including enterprise-level platforms built with React, Redux, Laravel, Node.js, and Spring Boot.
- Led development of a large MIS system for Tooisanz, delivering high-performance dashboards, real-time reporting, and secure API integrations.
- Built and maintained an MIS platform for Kantrica (USA), improving system reliability, loading speed, and user experience for international clients.
- Created a complete MIS for Crystal Pay, including authentication, transactions management, roles/permissions, and scalable backend architecture.
- Designed and implemented a microservices-based backend using Spring Boot, improving scalability, modularity, and deployment flexibility.
- Developed a full bank management system, including customer onboarding, accounts, transactions, notifications, and secure API communication.
- Built secure, production-ready REST APIs using Node.js, Laravel, and Spring Boot — optimized for performance, testing, and scalability.
- Integrated real-time communication using WebSockets and event-based architecture for live updates and chat features.
- Improved frontend performance by implementing optimized state management (Redux), code splitting, and caching strategies.
- Collaborated across teams (UI/UX, QA, DevOps) delivering projects on time with clean, maintainable code and best practices.
- Recently Qasid, one of the largest multinational bus transportation systems, building a complete multi-tenant platform with real-time booking, seat management, payments, and admin dashboards.

KEY ACHIEVEMENTS

Achievements

Successfully contributed as a Full-Stack Developer at Wamasolution and Tootisabz, delivering high-impact, scalable systems using React, Laravel, Spring Boot, and Node.js.

Built Qasid, a large-scale **multinational transportation system**, with real-time booking, seat management, and multi-tenant architecture.

Developed a PayPal-style microservice payment system supporting monthly transactions, built with **Spring Boot microservices, React**, and an **event-driven architecture using Apache Kafka** for reliable message streaming, improved scalability, and secure, fault-tolerant transaction processing.

Delivered multiple enterprise MIS platforms for international clients (Tooisanz, Kantrica – USA, Crystal Pay), improving performance, reporting accuracy, and operational productivity.

Designed and implemented a complete real-time chat application as a final-year project, including **video calls, audio calls, and instant messaging** using **MERN stack, WebSockets, and ZegoCloud**.

Built a full bank management system with customer onboarding, accounts, transactions, and secure API communication using Spring Boot microservices.

SKILLS

HTML, CSS, Bootstrap, Tailwind CSS, JavaScript, React.js, Redux Toolkit, Java (Spring Boot), Laravel, Node.js, RESTful API Development, Database Design, Docker, Git, GitHub, WebSockets, Apache Kafka

EDUCATION

Bachelor of software engineering

Gharjistan University

📅 2022 - 2025
